Summits on the Air – ARM for U.S.A. (W7O-Oregon)

Change Control

Date	Version	Details
15-Dec-23	2.8	Various summit names updated as per recent USGS name revision.
01-Mar-23	2.7	Add new summits allowed by the change of prominence from 500 to 492 feet. Update elevation and prominence data for summit additions and retirements. Revise Region Managers. Update USGS summit names and retire vanity names.
01-Nov-14	2.6	Transfer AM role to Etienne Scott, K7ATN Section 1.3 Final Ascent Rule explanation and change. Add Vanity Names to the following summits: - Kigerman – 9348 for W7O/SE-116 (KF7DDT)
31-Dec-12	2.5	Changed Winter Bonus dates to 1 Dec to 31 March; added Sacajawea Peak(W7O/NE-259) to NE Region; Changed Awards thresholds for Chasers to 2,500 pts; changed all summit references from W7 to W7O; Sunset East Peak (W7O/ NE-011) – lacks prominence; Sunset Backbone Ridge (W7O/ NE-135) – duplicate “straddle” summit; Add vanity name “Chasers Rock” to W7O/CN-082 (K7ATN).
01-Sep-10	2.00	Updated with “Numbered” Peaks, Maidenhead Grids, Counties, and Summit hyperlinks
07-Jun-10	1.00	Revised per SOTA MT comments.
01-Jun-10	0.99	Revised. Removed “Unnamed” Peaks from Region Tables. Corrected syntax verbiage. Added hyperlinks to the document.
28-May-10	0.95	First formal draft issue of this document to SOTA
15-May-10	0.9	Revised. Added 5 additional Regions.
30 Apr-10	0.8	Revised. Updated ARM. Added 5 Oregon Regions

Disclaimer

Hiking and mountain climbing are potentially hazardous activities particularly in Oregon with its extreme elevations, considerable climb exposures, and quick weather changes. The SOTA Management Team, the W7-Oregon Association and their officers do not accept responsibility for any death or injury resulting from participation in SOTA. The inclusion of a summit in this Reference Manual does not indicate that it is safe, legal, or even possible to climb the summit. The Summit Reference data is not guaranteed to be accurate and no reliance should be placed upon it. Any hiker must be sure to check applicable local, state, and federal laws to be sure that a hike or climb up any of the mountains listed in this manual is legal and safe. Some summits may reside in private hands, and all hikers must respect private property rights. As a particular caution to European hikers, please note that “Every Man’s Right” does not exist in the U.S.A.; permission to cross private lands must be expressly granted and cannot be assumed.

Many Oregon mountains are technically very demanding and require considerable traditional climbing experience, rope climbing skills, and competent knowledge of route selection and the associated risks. Mountain climbing in Oregon is a dangerous sport as the numerous climbing deaths on Mt. Hood attest. Technical climbing competency is a requirement for many peaks as many routes are technically graded

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

5.10 or greater based on the Yosemite Decimal System. Many routes offer poor protection with long runouts where a fall could result in serious injury or death.

Proper training, experience, and personal capability assessment is required. Skills-based training is readily available from many world-recognized climbing groups including the [Mazamas](#) and the [Seattle Mountaineers](#). Do not become a statistic!

1 Association Reference Data

Association	U.S.A. (W7-Oregon)		
Commencement date	01 July 2010		
Regions (10)	Region Name	REF Identifier	Peak Count
	North Coast	NC	128
	Central Coast	CC	146
	South Coast	SC	392
	Central	CE	320
	Cascades North	CN	106
	Cascades Middle	CM	152
	Cascades South	CS	199
	Northeast	NE	266
	Southeast	SE	187
	Willamette Valley	WV	142
	Total No. Peaks:	2038	
Association parameters ¹¹			
Summit operation criteria	Operation must be within 82 feet (25m) vertically of the summit		
Assistant Association Manager	Roland Simmons, K7FOP		

	Oregon	Peak Count
Band 1, score 1 point	< 3000 ft asl	474
Band 2, score 2 points	>=3000 ft asl <5000 ft asl	663
Band 3, score 4 points	>=5000 ft asl <6000 ft asl	406
Band 4, score 6 points	>=6000 ft asl <8000 ft asl	393
Band 5, score 8 points	>=8000 ft asl <9000 ft asl	67
Band 6, score 10 points	>=9000 ft asl	35
	Total No. Peaks	2038

Seasonal bonus	Yes
Bonus rationale	Winter period with highest probability of localized unpredictable weather impeding travel and/or freezing temperatures.
Min. height for bonus	Winter bonus - 3 Points for activations >=5000 ft asl
Bonus period dates	Winter Bonus -1 December to 31 March inclusive
W7O – Oregon Association sponsored awards	Contact the AM for award information
Association Manager	Etienne Scott – K7ATN (email current on QRZ.com)

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

1.1 Program derivation

W7O-Oregon SOTA is an extension of similar programs already active in other countries. Summit qualification for inclusion in the SOTA Program is based on the relative height of summits compared to their surroundings. The W7O-Oregon Association defines a minimum of 500 feet of vertical rise from the surrounding saddle in order to qualify. This vertical separation from surrounding terrain is the basis of the definition of geographic prominence, which Wikipedia has an excellent [description](#).

The W7O-Oregon SOTA has over 2,000 mountains that meet the prominence criteria based on data collected by the [USGS](#) (U.S. Geologic Survey) national surveys. See this [link](#) for more detail about the USGS survey processes. In particular, the USGS maintains a huge (80+ gigabytes) of National Elevation Data (“[NED](#)”) for all surveyed peaks in the USA. The W7O-Oregon SOTA dataset was derived from this USGS NED database. This database contains both named and un-named mountains (“numbered”) which also meet the prominence requirements of SOTA. The goal of this ARM is to develop a list of qualifying summits that are relatively accessible, climbable, and have a history of ascent. Therefore the “un-named” mountains have been included in this ARM.

Participants in the W7O-Oregon SOTA program must meet the qualifications stated in the SOTA General Rules, and must participate in accordance with these rules. In cases where information in this reference is in conflict with the General Rules, the General Rules shall take precedence. Full text of the SOTA General Rules can be found [here](#).

1.2 General information

W7O-Oregon SOTA Program includes those summits within the jurisdiction of the Federal Communications Commission (FCC). The FCC issues amateur radio licenses with the prefix W7 by default for all Oregon applicants. All participants in the SOTA Program must be currently licensed by the FCC. The US amateur call region of W7 encompasses seven western US states. The Pacific Northwest states of Washington and Oregon, the Intermountain states of Montana, Idaho, and Wyoming, and the Desert Southwest states of Nevada, Utah and Arizona, combined, have nearly as many SOTA qualifying summits as the three Alaska associations.

If the reader finds a summit which he believes to meet the qualifications of the SOTA program, or if a mistake is found in the summit data, please contact the Region Manager. If an activator wishes to see a particular summit included in the Oregon Regions, please provide the Association and Region Managers the following information:

1. Name of summit as named on the USGS [Geonames](#) database.
2. The Latitude and Longitude of summit.
3. The elevation of the summit above sea level.
4. The summit’s prominence value along with a citation of the source of this data.

The Region Manager will check whether the summit meets the qualification criteria and, if it does, will forward this information to the Association Manager and the SOTA Management Team for inclusion in the database. The decisions of the Association Manager and the Management Team are final regarding the interpretation of the criteria and the inclusion or exclusion of a summit. Summits cannot be counted for points in the SOTA program until a reference number has been issued in the SOTA Summits database.

1.3 Final Ascent and Activation Zone explained

The SOTA General Rules (ver 1.21, 1 June 2022) Section **3.7.1 Criteria for a valid Expedition**. Rule 3 of that section reads as follows:

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

3. Operations must not be in, or in the vicinity of a motor vehicle. No part of the station may be connected in any way to the motor vehicle.

“Final access” is interpreted to mean the “final approach” to the operating location that is in the summit activation zone as required for W7O. No specific horizontal hike distance is required for an activation to be valid; the SOTA station cannot be connected in any way to motor vehicle or fossil-fuel electrical generator.

The SOTA general rules also state that radio operations must take place within a summit’s Activation Zone, which, in the case of the W7O-Oregon association, is an area within 82 vertical feet of the actual summit point. The Activation Zone is a single, “unbroken” area which can be visualized by drawing a closed shape on a map, following a contour line 82 feet below the summit point. Another way to describe the activation zone is any place that has a route to the summit point that does not dip below 82 feet of the summit point. The operating position must be within this zone, but antennas may extend well beyond.

Activators should feel free to contact the Association Manager should further clarification be deemed necessary, or if any doubt exists in an activator’s mind as to whether his activation will be valid for SOTA credit.

1.4 Rights of way and access issues

If the land you are on is not your own, then you are trespassing. Trespassing may be done legally, with the permission of the landowner, either expressed or implied. Right of way on undeveloped land is implied unless the land is fenced and or posted in accordance with state law. Posted private lands may not be entered without expressed permission. Camping on private land may be done legally only with the expressed permission of the landowner.

Most W7O-Oregon SOTA summits are located on public land. Public lands may be administered by Federal, State, and Local Governments which may put limitations on their use. Do not assume that all public lands, and the roads and trails upon them, are available for public access. If the summit you wish to visit is on public land, find out which agency administers the land, such as a particular National Forest or Park, and contact that agency’s information office for site specific requirements for access. Many backcountry trails have Trail Head registers at the trail entrance or require a small “parking fee” for trail use. For your own safety log your Trail activity and respect the parking fee requirements.

Only a fool would trespass on Native American land or US Military land without prior permission.

If an activator does manage to receive permission from a private landowner to activate a private summit, the activator must remember he may be the landowner’s only contact with SOTA or amateur radio and the activator must adhere to the highest standards of politeness and professionalism for this activation so as to pave the way for future activators to be authorized. All activators must adhere to the outdoor ethic of “Leave No Trace”.

The SOTAwatch [website](#) and the PNW SOTA [website](#) are excellent repositories of summit access information, and all activators are encouraged to submit any mapping, trail, access permission or other specific summit advice they can acquire. Please be sure to respect intellectual property law when adding information to the SOTA watch site.

1.5 Maps and navigation

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

US Geological Survey (USGS) maps are considered the standard for backcountry travel. USGS topographic maps accurately represent the natural and manmade features of the land to stringent National Map Accuracy Standards.

USGS maps of the 7½ Minute Series (covering 7½ x 7½ minutes of geographic arc) show most maintained trails and contour intervals of 40 ft. at a scale of 1:24,000. Carrying these maps as a primary or backup source of navigation information is strongly recommended even if you are familiar with the terrain.

USGS maps of the 30 x 60 Minute Series, with a scale of 1:100,000, are commonly referred to as “land use maps” and are useful in determining what lands are publicly and privately owned, and which government agency is responsible for managing a particular publicly owned area.

Also useful are US Forest Service, National Park, and State Park maps which show parking, camping, toilet, trash, and other visitor facilities. It is easy to get disoriented! Only the foolhardy will venture onto the mountains without adequate navigation equipment and the knowledge to use it. By itself a GPS device is not an adequate substitute since batteries do run down.

The Grid reference system used in this ARM will be Latitude and Longitude expressed in [Decimal-Degrees](#). All Latitudes are positive and all Longitudes are negative for the W7O-Oregon ARM. This system has been chosen for its compatibility with [Google Maps](#). Potential activators and chasers need only enter a summit’s decimal coordinates into Google Maps to see a topographic, satellite or road map of a summit or to find driving directions to the closest roads.

The Association Manager suggests that the potential activator conduct internet searches for the specific regions and summits he is interested in. Such internet searches may yield links to hiking, biking, and climbing groups that share intimate local knowledge of a summit, its access, and nearby resources.

1.6 Safety considerations

Mountaineering and backcountry hiking is an inherently risky endeavor. The consequences of thoughtless actions can be tragic. While the risks you assume by participating in SOTA activities can never be dismissed, they can be greatly diminished through knowledge, preparation and experience.

The W7O-Oregon association contains vast expanses of remote, undeveloped land. Trailheads may be located many miles from the nearest town, highway or home. Many areas have NO cellphone coverage. Be sure your vehicle is appropriate for the roads you intend to travel, and is in good condition. Carry enough food and water to be stranded for a few days while waiting for help to come. The most mountainous or backcountry areas are an inhospitable environment with scarce resources to sustain your life.

The “Ten Essentials” is a list of essential items hiking authorities deem necessary for safe travel in the backcountry. The Ten Essentials were first described in the 1930s by The Mountaineers, a Seattle-based organization for climbers and outdoor adventurers. Many regional organizations and authors recommend that hikers, backpackers, and climbers rigorously ensure they have the Ten Essentials with them. Carrying these basic items improves the chances that one is prepared for an unexpected emergency in the outdoors.

The Mountaineer’s updated “systems” approach made its debut in the seventh edition of its seminal text on climbing and outdoor exploration, [Mountaineering: The Freedom of the Hills \(The Mountaineers Books, 2003\)](#):

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

Updated Ten Essential "Systems"

1. Navigation Systems (map, compass, GPS, etc)
2. Sun protection (clothing, hats, sunglasses, skin protection creams)
3. Insulation (extra clothing)
4. Illumination (headlamps, LED flashlights, extra long-lasting batteries, solar panels)
5. First-aid supplies
6. Fire (matches, firestarters)
7. Repair kit and tools
8. Nutrition (extra food)
9. Hydration (extra water, purification capability)
10. Emergency shelter and signaling devices (mirrors, radios, [Spot](#) devices)

A bear can destroy your car for a morsel of food left inside. The sting of a scorpion can hospitalize you. The bite of a rattlesnake can be fatal in the backcountry. A mountain lion can track and attack you. Understanding the range and behavior of these animals and adapting your plans accordingly will greatly decrease your risk.

The hiking or climbing approaches to many W7O-Oregon SOTA summits can be long and technical. Assess your skill and fitness levels realistically and travel well within your limitations. Remember, once you make the summit, you are only half the way home. Often the down climb is where most accidents occur due to fatigue and lack of focus! "It's a round trip. Getting to the summit is optional, getting down is mandatory." *Ed Viesturs, first American to summit all 14 peaks over 8,000 meters.*

1.7 Fines for your own Rescue

A number of states are beginning to enforce a reimbursement for costs associated for backcountry rescue operations, especially when significant negligence occurred. Here is an excerpt from Oregon Statute:

ORS 401.590 Reimbursement of public body for search and rescue by benefited persons;

(1) A public body may collect an amount specified in this section as reimbursement for the cost of search and rescue activities when the public body conducts search and rescue activities for the benefit of hikers, climbers, hunters and other users of wilderness areas or unpopulated forested or mountainous recreational areas in this state.

(2) The public body may collect moneys as authorized by this section from each person for whose benefit search and rescue activities are conducted. The public body may not collect more than \$500 from an individual under this section and may not collect more than the actual cost of the search and rescue activities from all of the individuals for whose benefit the activities are conducted.

(3) A public body may obtain reimbursement under this section only when:

- (a) Reasonable care was not exercised by the individuals for whose benefit the search and rescue activities are conducted; or*
- (b) Applicable laws were violated by such individuals.*

(4) Any individual who is charged a fee for reimbursement under this section may appeal the charge or the amount of the fee to the public body that charged the fee.

(5) For the purposes of subsection (3) of this section, evidence of reasonable care includes:

- (a) The individuals possessed experience and used equipment that was appropriate for the known conditions of weather and terrain.*
- (b) The individuals used or attempted to use locating devices or cellular telephones when appropriate.*
- (c) The individuals notified responsible persons or organizations of the expected time of departure and the expected time of return and the planned location or route of activity.*
- (d) The individuals had maps and orienteering equipment and used trails or other routes that were appropriate for the conditions.*

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

(6) As used in this section, “public body” means any unit of state or local government that conducts or has authority to conduct search and rescue activities. [1995 c.570 §1]

1.8 Navigation and Weather

Before hiking always check [weather forecasts](#) for the area on a website. Please remember that weather in the mountains can change rapidly and you should always be prepared both for snow, rain, strong wind or intensive sun, especially over 3000 feet asl. Additionally, an activator should always be prepared for his hike to take longer than originally planned. An activator should know the next several day’s weather forecast including sunrise and sunset times and should carry a flashlight and at least several day’s rations and clothing for an emergency overnight stay even if an activation is scheduled to end well before nightfall.

The prudent activator always leaves someone back home a copy of the planned hike route, as well as the time he expects to finish his activation. Additionally, many trailheads have a Register for hikers to sign in and out of at the start and finish of their hike. These registers can help emergency services determine where and if a hiker is lost on the trail.

In case of emergencies on the trail activators should call 911 from their cell phone and have their Latitude and Longitude ready to give to the authorities. While 911 is the emergency number for assistance across the USA, cell phone coverage from mountainous areas is not reliable, and activators should always maintain some reserve battery capacity for their amateur radio equipment should cell phones fail in an emergency while on an activation. Additionally, not all areas in the USA are equipped for emergency services to determine a victim’s location purely based on his cell phone signal. A victim should know his location by latitude and longitude to greatly expedite an emergency response to his location.

Mountain roads are often unstable and subject to temporary closure due to landslide, fire, or maintenance. The condition of access roads through forest, park, or [BLM](#) (Bureau of Land Management) lands should be confirmed by contacting the appropriate local managing agency. Check local highway travel conditions prior to departure.

Mountain weather can vary from blazing heat to blowing snow at a single location in a single 12-hour period. Be prepared to travel and to stay for several unplanned days in any type of weather you may encounter. [NOAA](#) forecasts should be checked at before any travel commences. Current conditions and local hazardous weather warnings should be monitored at [Oregon Road Reports](#).

Flash flooding is a deadly threat in narrow canyons, foothills and desert areas. Observe posted warnings.

Lightning is always a present danger above timberline! Know the early signs of weather associated with lightning. Upon the first sign of visible thunderstorms, lightning, or thunder, reduce your exposure immediately by descending. Know that proximity to your antenna puts you at greater risk. Do not seek shelter under trees or rock outcrops.

1.9 Physical Exertion

Many of the summits listed in this manual require serious physical exertion to activate. Know your limitations, listen to your body and put your health before amateur radio. Check your pulse under heavy exertion and remember to slow down, bring plenty of water and enjoy the activation. Medical evacuation from many of the listed summits is slow and difficult for the emergency services. A heart attack on the trail is likely to result in death as medical services require some time to respond.

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

1.10 Environmental Considerations

FOLLOW ALL POSTED FIRE RESTRICTIONS OR YOU MAY END UP IN PRISON. This is not an exaggeration.

Burn area restoration, use impact recovery, threatened species habitat preservation, and wildfire risks are common in public lands of Oregon are subject to temporary use restrictions and area closures. Such changes to access are always advertised and well posted. Check with the administering agencies and NEVER violate these restrictions. Forest fires are common in the Oregon summertime and many Forest Service or BLM roads may be closed temporarily. Check with the nearest District Forest Service office for detailed information.

1.11 Foreign Radio Amateurs (From the [ARRL website](#))

Foreign Amateurs who wish to operate in the US may do so if the country of which they are a citizen and amateur licensee has entered into a bilateral or multilateral reciprocal operating agreement with the US. Such agreements can include a reciprocal licensing agreement, CEPT license, or IARP permit. No additional permit is required -- simply bring your original license, issued by your home country when you visit the US. Be sure to identify your station while operating by the US call district identifier followed by your non-US callsign. For example, W7/G1ABC. It is no longer necessary to include a "portable" designator ("/p") in your callsign.

For full details of operating in the USA with a foreign license, please see the ARRL [website](#). The ARRL is America's and perhaps the world's largest amateur radio club and is an invaluable resource of operating information for foreign and domestic amateur radio operators. In general, the FCC welcomes foreign amateurs and receiving operating permission should be reasonably easy. In the USA FCC regulations should be strictly adhered to.

US operating band plan information can be found [here](#) and frequency allocation charts and formation can be found [here](#).

Additionally, the Association Manager is not aware of any customs regulations addressing the importation of amateur radios to America, and in general FCC type acceptance standards are loose enough to allow for operation of foreign type accepted amateur radios and even homebrew radios.

Finally, foreign hams should read and understand ARM section 1.3 Rights of Way and Access Issues.

If no agreement exists, it is possible for foreign citizens to take the U.S. ham radio exam to receive their FCC issued license. Any individual can take the exam except agents of foreign governments. Dates and locations of license exams can be found [here](#).

Please note, it may take at least two weeks or more for a newly licensed amateur to receive a license and operating privileges. It is advisable that a foreign amateur allow much more time. Also remember that in the U.S. a ham must carry his license and CEPT documentation on his person whenever he is operating amateur radio gear. If requested by any authority, this documentation must be disclosed. Your license cannot be left at home or in your hotel.

1.12 Association Awards

The W7O-Oregon association does not at present sponsor any Association awards at this time, but several are under consideration.

1.13 Process to maintain summit lists

The W7O-Oregon Association Manager shall make available to all interested parties a process to petition for the addition, correction, or removal of summit listings. A summit is to be added to the list if the petitioner demonstrates that it meets the qualification of prominence and that public access is available. A summit listing is to be corrected if the petitioner demonstrates that the factual information presented is incorrect. A summit is to be deleted if the petitioner demonstrates a permanent lack of public access to, or prohibition on radio operations from its location. Petitions are to be reviewed and appropriate action taken at least once per calendar year.

Appendix A - Summit Reference Data

A1 Region Reference OR-Central Coast

Association	W7O
Region	OR-Central Coast (CC)
Region Manager	Troy Greenburg, KF7SEY - KF7SEY@gmail.com

A1.1 Regional notes

The Central Coast Region in Oregon is defined geographically as west of the Willamette Valley and separated by the Oregon Coastal Mountain ranges. It is readily accessible from the major Willamette Valley population centers of Portland, Salem, and Eugene. Economically it depends heavily on the tourist industries for sport salmon fishing, thriving art communities, and very scenic Oregon coastline.

Most of the SOTA summits in this Region are in the east and west flanks of the Oregon Coastal Mountains.

A1.2 Table of summits

Ref	Summit Name	Ele. (m)	Ele. (ft)	Lon.	Lat.	Val. from	Val. to	Pts
W7O/CC-001	Marys Peak	1249	4097	-123.5524	44.5044	01/07/2010		2

A2 Region Reference OR-Central Oregon

Association	W7O
Region	OR-Central Oregon (CE)
Region Manager	Chris Johannsen, W7MTB - chrisbjohannsen@gmail.com

A2.1 Regional notes

Central Oregon is defined geographically as east of the Oregon Cascades that run north and south through the entire state at approximately 122-degrees west longitude. It is high desert country characterized by sagebrush and pine trees. Average desert floor elevations are typically 3,000 feet (900m) or more. It is known as the “sunny side of Oregon” where average annual rainfall is generally less than 12 inches per year.

Most of the SOTA summits in this Region are on the eastern flanks of the Oregon Cascades.

A3 Region Reference OR-Cascades Middle

Association	W7O
Region	OR-Cascades Middle (CM)
Region Manager	Phil Shepard, NS7P - phil@riouusa.com

A3.1 Regional notes

The Middle Oregon Cascades are part of a much larger mountain range that extends from British Columbia south into extreme southern California. The Oregon Cascades are best known for their recreational opportunities with major, world-class ski resorts on Mt. Hood in the north and Mt. Bachelor in the south to seven major national forests including Crater Lake National Park and the Oregon Caves National Monument.

A4 Region Reference OR-Cascades North

Association	W7O
Region	OR-Cascades North (CN)
Region Manager	Etienne Scott, K7ATN - climb2ski@gmail.com

A4.1 Regional notes

The North Oregon Cascades are part of a much larger mountain range that extends from British Columbia south into extreme southern California. The Oregon Cascades are best known for their recreational opportunities with major, world-class ski resorts on Mt. Hood and Mt. Bachelor in the south to seven major national forests including Crater Lake National Park and the Oregon Caves National Monument.

Most of the peaks in the Cascades can be dangerous and do experience life-threatening winter weather.

A5 Region Reference OR-Cascades South

Association	W7O
Region	OR-Cascades South (CS)

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

Region Manager

Amy Haptonstall, AG7GP - ag7gp.amy@gmail.com

A5.1 Regional notes

The South Oregon Cascades are part of a much larger mountain range that extends from British Columbia south into extreme southern California. The Oregon Cascades are best known for their recreational opportunities with major, world-class ski resorts on Mt. Hood and Mt. Bachelor in the south to seven major national forests including Crater Lake National Park and the Oregon Caves National Monument.

Region Manager	Brian Dickman, NR7Y - brian.dickman@gmail.com

A6.1 Regional notes

North Coastal Oregon is defined geographically as west of the Willamette Valley and the Coastal Mountain range that run north and south through the entire state at approximately 123.5-degrees west longitude. Defined by local towns of Astoria and Tillamook, it is a historically rich region. Fort Astoria was the first established American-owned city on the west coast of the Americas in 1811. It later became part of the Hudson Bay Company.

Today, the economic area is primarily Portland tourist-based due to the very scenic north Oregon coast. The Tillamook area is a regional center for dairy farming. In contrast to the Willamette Valley, it is very rainy with annual rainfall more than 80 inches. It is a marine, ocean area characterized by lush vegetation and towering Douglas Fir trees. The Coastal Mountain range “stops” a considerable amount of rainfall as Pacific storms come inland to the Pacific Northwest. It is part of the “rainy side of Oregon”.

Most of the SOTA summits in this Region are in the Coastal Mountain range.

Association	W7O
Region	OR-Northeast (NE)
Region Manager	Etienne Scott, K7ATN - climb2ski@gmail.com

A7.1 Regional notes

Northeast Oregon is defined geographically as on the border with Idaho with the nation's deepest canyon gorge (Hell's Canyon) carved by the Snake River which joins the Columbia in Southeastern Washington. It is high desert country characterized by sagebrush and tall pine trees. Average desert floor elevations are typically 5,000 feet (1525m) or more. There are a number of spectacularly scenic mountain ranges in this region including the Eagle Cap Wilderness Area and the Wallowa Mountains.

Region	OR-South Coastal (SC)
Region Manager	Amy Haptonstall, AG7GP - ag7gp.amy@gmail.com

Summits on the Air – ARM for U.S.A. (W7O-Oregon)

A8.1 Regional notes

The South Coast Region in Oregon is defined geographically as west of the Willamette Valley and separated by the Oregon Coastal Mountain ranges. Regionally it is known as the “Gold Coast” area. This Region is more remote from the Oregon population centers but still has a thriving tourist industry. The area is very scenic, the coast line is spectacular, and the weather considerably warmer and sunny that much farther north.

Most of the SOTA summits in this Region are in the east and west flanks of the Oregon Coastal Mountains.

A8.2 Table of summits

Ref	Summit Name	Ele. (m)	Ele. (ft)	Lon.	Lat.	Val. from	Val. to	Pts

Region Manager	Amy Haptonstall, AG7GP - ag7gp.amy@gmail.com

A9.1 Regional notes

Southeast Oregon is defined geographically as on the border with southern Idaho. It is high desert country characterized by sagebrush and wide open desert. Average desert floor elevations are typically 3,000 feet or more. There are a number of scenic mountain ranges in this region including the spectacular Steens Mountains. Both Malheur and Harney Counties are stopover locations for migrating Canadian Geese. It is a population sparse region.

Region Manager	Phil Shepard, NS7P - phil@rioua.com

A10.1 Regional notes

The Willamette Valley Region encompasses the fertile Willamette River valley north from Eugene to Portland. It is the primary center for 70% or more of Oregon's population and is geographically flanked by the Oregon Cascades to the east and the Coastal Mountains to the west. A number of SOTA summits are on the flanks of these respective mountain ranges.

A10.2 Table of summits

Ref	Summit Name	Ele. (m)	Ele. (ft)	Lon.	Lat.	Val. from	Val. to	Pts
W7O/WV-001	Miller Mountain	2290	7513	-121.9742	43.2617	01/07/2010		6
